#94100 Easy Stacker

Accessories

Quick Shift

Ensures a quick change between forks, Easy Gripper, Easy Stacker and other accessories. Quick Shift is mounted directly on the forklift, mini-loader, telescope loader or other front loader. The Quick Shift module is optional.

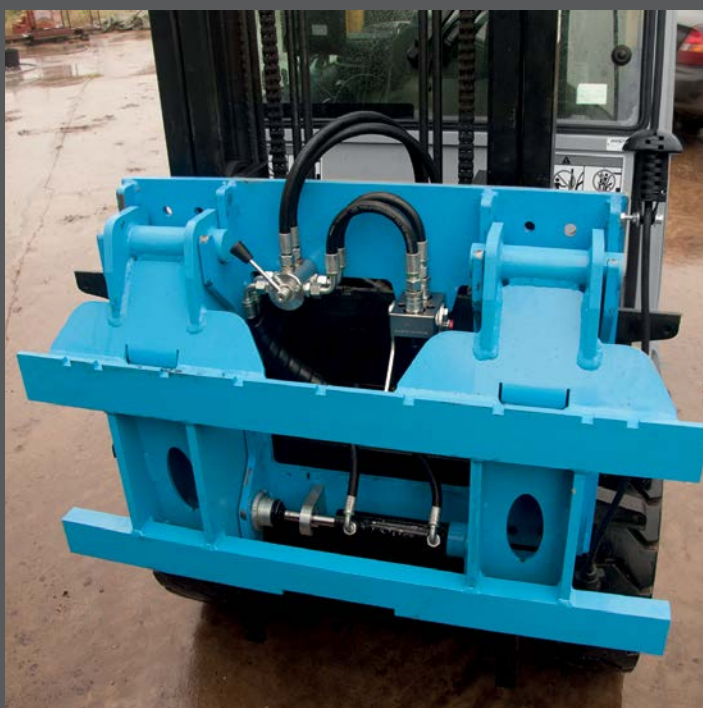

Remote Control

The compact remote control can be placed in many places in the cab. This ensures a simple and safe operation even if the forklift only has one hydraulic output for the 2 functions on the Easy Stacker 1200. The remote control has easy-to-understand symbols for the GRIP - TILT functions. A bright LED next to each button indicates which function is active when the one hydraulic channel on the forklift is activated. Forklifts with 2 independent hydraulic channels do not need the remote control. The remote control is standard equipment.

Fork Module

With this fork module, and the above Quick Shift, forks can be attached, and a shift between Easy Gripper and the fork module can be done in less than 1 minute.

#94100 Easy Stacker

We have developed the #94100 Easy Stacker, which sets new market standards for professional processing times.

Effectively manages both lifting and stacking tasks of many tires in one single operation.

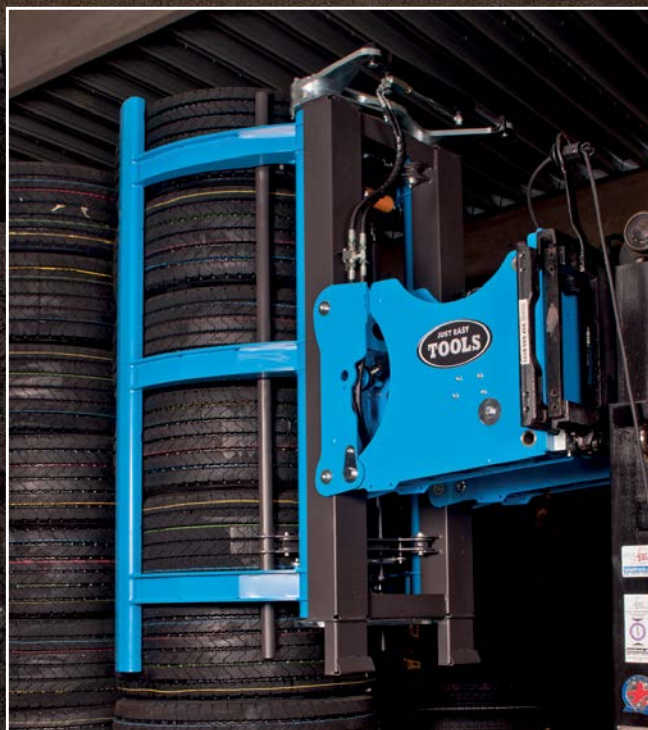

With Easy Stacker, a forklift driver can load a truck with tires in 1 hour without breaking a sweat. This work used to take 3 men 3 hours to perform, and the work was also both dangerous and harmful to their health. Falls and back problems are especially common in the industry. All this is history with the Easy Stacker.

The tire industry knows that it is both dangerous and difficult to fill a trailer completely with tires. The Easy Stacker 1200 does not suffer from these limitations, and you can therefore load 20-40% more tires in one go! This saves both money and CO₂!

Saves time!

*Improves
safety!*

Improves stock capacity
and efficiency

The #94100 Easy Stacker

is the first model in a series of stacking tools for handling various industrial materials. The gripping surfaces shown are well-suited for gripping tires, but other gripping systems can be supplied upon request. An adjustable strength limiter ensures that all the materials can withstand the strong firm grip from the hydraulic arms. For example, the stacker can be adapted to handle moulded metal and concrete parts.

Technical data

- #94100 Easy Stacker - standard
- Lifting capacity: 1,653.47 lb (750 kg).
- Gripping diameter on tires: 19.7" - 47.2" (500-1,200 mm).
- Grip length 82.7" (2,100 mm).
- Adjustable gripping force max.: 2,204.6 lb (1,000 kg).
- Supply voltage 12V. (possibly 24V)
- Hydraulics supply 100 bar. Preferably 3/8" Hose.
- Lifting height depends on forklift/loader.
- Horizontal/Vertical. 0-90 degrees.
- Quick switching on forklift/loader.
- Net weight: 1388.9 lb (630 kg).

A necessary and suitable tool for professionals

Professionals protect themselves against potential injury risks by using appropriate tools. Before the #94100 Easy Stacker, a suitable tool did not exist and work tasks were solved through a random combination of forklift, crowbars and hazardous work.

The Easy Stacker secures many tires safely without other handling being necessary.

The Easy Stacker stacks many tires effectively without other handling being necessary.

The process of stacking or moving big heavy tires becomes both safer and more effective when the #94100 Easy Stacker performs the task.
