IRIS-I INSIGHT SENSOR

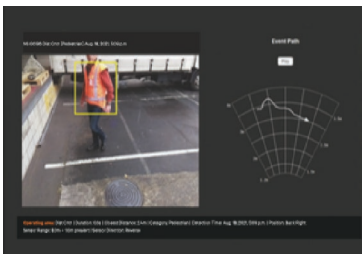

AIG Safety is committed to providing universal safety solutions. Managing the safety of pedestrians working near mobile and/or heavy equipment can be challenging and stressful.

IRIS-i Insight combines active pedestrian detection and video recording to provide detection of reflective tape of high-vis safety vest and accountability for post-event analysis.

If a pedestrian enters the critical risk zone, they and the driver receive an audible alert. A video recording of the event is available for safety training, post-accident analysis and reconstruction.

**Audible Alerts for
Pedestrians or
High-Vis Detected**

**Records Video for
Safety Training &
Post Accident Analysis**
